Measuring Data Uncertainty: An Application using the Bank of England's 'Fan Charts' for Historical GDP Growth

Ana Galvao (Warwick Business School)

July 22, 13:30 – 14:30

Alfred-Weber-Institute, Bergheimer Str. 58, Room 00.010

Abstract:

Historical economic data are often uncertain due to sampling and non-sampling errors. But data uncertainty is rarely communicated quantitatively. An exception are the fan charts for historical GDP growth published at the Bank of England. We propose a generic loss function based approach to extract from these ex ante density forecasts a quantitative measure of unforecastable data uncertainty. We find GDP data uncertainty in the UK rose sharply at the onset of the 2008/9 recession; and that data uncertainty is positively correlated with popular estimates of macroeconomic uncertainty.
